

The Official C++ Language Slack Workspace

<https://cpp.al/slack>

- Live chat for C++ community
- All countries and time zones
- Meet both novices and experts
- Home to Boost contributors
- Video and audio group calls
- Phone, browser, and desktop
- Full message and media history
- GitHub integration, and more.

Boost C++ Libraries

<https://boost.org>

- Over 150 great libraries
- Three releases per year
- Often preinstalled
- Written by experts
- Fully documented
- Continuously tested

Using Boost will make your code portable, save you time, and increase your productivity at work or at home.

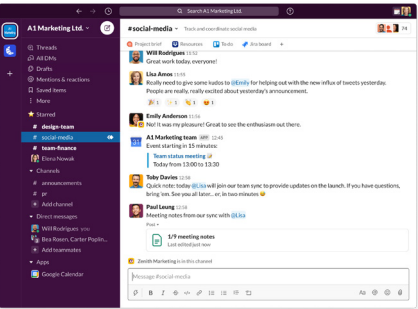

A Fresh Look!

Slack is a registered trademark and service mark of Slack Technologies, Inc.

In the last seven years the collection has been revitalized by fresh volunteers and ideas. Join us as we discover the new Boost.

The C++ Alliance is a financial sponsor of Boost and a Bronze supporter of CppCon 2024. Visit us at <https://cpp.al>

Boost Has Something for Everyone

Networking

Write portable, optimized web applications using coroutines (since C++20) or callbacks (since C++11) without waiting for the Standard Library to catch up.

[Boost.Asio](#) networking lets you connect to the Internet easily and efficiently

[Boost.Beast](#) speaks HTTP and WebSocket with an expertly designed interface

[Boost.Redis](#) is a client with unparalleled performance and scalability.

[Boost.MySQL](#) connects to external databases with an idiomatic API

[Boost.JSON](#) implements the web's standard for data interchange

[Boost.URL](#) does fast parsing and manipulation of URLs

Compatibility

Stuck on older toolchains? These libraries all work since C++11:

[Boost.Assert](#) has `<source_location>`

[Boost.Charconv](#) provides `<charconv>`

[Boost.Variant2](#) is a never valueless `<variant>`

[Boost.Optional](#) is like `<optional>` and supports references!

Innovation

*Why wait for the Standard Library?
Use these elegant solutions to common problems now.*

[Boost.Unordered](#) is a family of best-in-class hash containers

[Boost.Mp11](#) offers powerful metaprogramming tools since C++11 and later

[Boost.Describe](#) brings practical reflection since C++14

[Boost.Parser](#) will deliver modern, easy to use combinators (in 1.87.0)

[Boost.Scope](#) runs your code at scope exit. Based on P0052R10

Science

Boost is the industry leader for scientific applications where performance and correctness are paramount. These algorithms do the work so you don't have to.

[Boost.Math](#) speaks CUDA and is so good, even the STL uses it

[Boost.Geometry](#) contains precision-engineered spatial algorithms

[Boost.Multiprecision](#) has big numbers for big problems
